

1. Check the version of your chrome

For example this is my version:

2. Go to <https://chromedriver.chromium.org/home> to download the chrome driver for the same version
3. Open Finder, click go -> go to folder -> type in /usr/local/bin in the window then hit go
4. Copy paste your chrome driver to this folder.
5. **Restart your computer, it should work.**
6. If you want to verify it, you can execute two lines of code in a ipynb file in vscode (After you installed all python packages):
from selenium import webdriver

```
driver = webdriver.Chrome()  
If your chrome jumps out automatically, you are good to go.
```
